

WHISPLI PASSWORD POLICY

hello@whispli.com Level 29, 20 Bond Street, Sydney NSW 2000

PURPOSE OF THIS DOCUMENT

The purpose of this policy is to make sure the Whispli platform and any data received during the use of the platform is adequately protected. The policy covers all users who are responsible for one or more accounts or have access to any resources that may require a password.

OVERVIEW

Users of the Whispli Platform (including products Fraudsec, SchoolSafe, JournoTips, AgedCareLine, ReportDV and ReportSomebody), acknowledge that passwords are a key part of the platform and in order to maintain its integrity passwords are used to ensure only authorised people can access the platform.

• Password Creation

All passwords should be reasonably complex and difficult for unauthorized people to guess. Users should choose passwords that are :

- Minimum eight (8) characters long, including:
 - Minimum 1 uppercase character.
 - Minimum 1 number.
 - Minimum 1 Special character (i.e. !@#\$%)
 - Must not be on the Whispli Password Blacklist.

In addition to meeting those requirements, users should also use common sense when choosing passwords. They must avoid basic combinations that are easy to crack; like "Password!" Further to this, easy combinations that are company specific should also be avoided; like "Procurement!"

A password should be unique, with meaning only to the user who chooses it. That means dictionary words, common phrases and even names should be avoided.

One recommended method to choosing a strong password that is still easy to remember: Pick a phrase, take its initials and replace some of those with numbers and other characters and mix up the capitalisation. For example, the phrase "This may be one way to remember" can become "TmBOWTr!"

WHISPLI INTERNAL VULNERABILITY

hello@whispli.com Level 29, 20 Bond Street, Sydney NSW 2000

If the security of a password is in doubt - for example, if it appears that an unauthorised person has logged in to the account - the password must be changed immediately.

- **Protecting Passwords**

Users may never share their passwords with anyone else in their company, including co-workers, managers, administrative assistants, IT staff members, etc or with Whispli. Everyone who needs access to a system will choose their own unique password.

Users may never share their passwords with any outside parties, including those claiming to be representatives of a business partner (i.e. Whispli) with a legitimate need to access a system.

Users should take steps to avoid phishing scams and other attempts by hackers to steal passwords and other sensitive information.

Users must refrain from writing passwords down and keeping them at their workstations. See above for advice on creating memorable but secure passwords.

Users should not use password managers or other tools to help store and remember passwords.

- **Whispli Password Blacklist**

Whispli has a "Blacklist" of passwords that the platform will not accept as a password even if it meets requirements. This list is updated regularly.

As of October 24th, 2016, passwords contained on the Whispli Blacklist include:
